Metrology, Test & Measurement Specialty

Every day decisions effecting health, safety, welfare, and security of millions of Americans are made on the basis of a measurement – a blood pressure, a turbine exhaust temperature, a gallon of gasoline, or the force needed to holdback an F/A-18 fighter awaiting clearance to launch from a Naval aircraft carrier. Decision results? Directly attributable to the quality of these measurements.

Founded in October 2000 by Frank Griffo (President and Chief Executive Officer) and William O'Dell (Chief Operating Officer), Assurance Technology Group LLC (ATG), a veteran-owned small business, provides government, academia, and industry with measurement assurance products and services to ensure quality data and decisions.

Our scope of competency encompasses measurement science (metrology), calibration, test, and evaluation within avionic and weapon system test, maintenance, OEM, and calibration laboratories facilities.

Our human capital comprises engineers, analysts, technicians, programmers, quality assurance and technical / program management personnel.

Our experience includes calibration, test, evaluation and in-service engineering support spanning a broad range of equipment used within the aviation community including: avionics and sensors; aircraft support equipment; special purpose test equipment; general purpose test equipment; precision measurement equipment; automated test equipment and hardware-in-the-loop simulators and stimulators.

ATG performs quality audits of calibration laboratories, develops corrective actions and recommends certification for compliant laboratories. We manage the allowancing and repair of calibration equipment and standards used by calibration laboratories. We provide technical management support to the metrology and calibration program offices including direction of improvement initiatives in the areas of program management, technical / operational process, issue management, program analysis, and strategic planning. ATG has also been integral to the engineering and development of product solutions for domestic and foreign military calibration laboratories including laboratory information systems, the automated calibration systems, and technical data products and libraries.

As a Navy SeaPort contractor, ATG provides technical support services for the Naval Surface Warfare Center Corona, CA Measurement Science Directorate and calibration laboratory operations for the Naval Air Warfare Center Patuxent River, MD Metrology Engineering Support Branch (MESB).

ATG performs equipment management, recall, calibration and repair of physical, dimensional, electronic, radio frequency and microwave test equipment required to support aircraft platforms at Patuxent River as well as many of the fleet activities along the eastern seaboard. These include the Presidential Helicopter Squadron (HMX1) at Quantico, VA; the Aircraft Intermediate Maintenance Departments at Patuxent River, MD; Brunswick, ME; Willow Grove, PA; Sigonella, Sicily; and Marine Aviation Logistics Squadrons at New River, NC; and Newburg, NY. ATG develops and writes Instrument Calibration Procedures (ICP), develops new measurement methodologies, performs in-service engineering investigations and manages the repair of naval aviation calibration equipment inventories. ATG prepares purchase requests and performs market research supporting acquisition of calibration equipment for the Consolidated Automated Support System (CASS) and Naval Aviation community.

Our customers also include the American Electronic Warfare Associates (AMEWAS) where ATG provides technical services supporting the Naval Air Warfare Center Aircraft Division (NAWC-AD) Air Combat Test and Evaluation Facility (ACETEF). ATG engineers and technicians develop, operate, and maintain ACETEF's radar, electro-optic / infrared, and electronic warfare test laboratories. Our work in this area includes joint development of Navy, Air Force, and Army hardware-in-the-loop simulation laboratory capabilities, verification and validation of laboratory systems, system maintenance and repair, preparation of test plans and reports, and operation of laboratories during test and evaluation of weapon systems and avionics. ATG is proud of its successes leveraging measurement science expertise in these advanced complex T&E environment.

ATG provides a one-stop solution to meet any and all requirements for metrology, test and measurement support, including:

- Laboratory Management and Operation
- Test Equipment Management
- Metrology Engineering
- Simulation
- Equipment Calibration
- Quality Assurance
- In-service Engineering
- Technical Program Management Support
